

Joffiels - End-to-End Workflow

Etsy order entry → delivery · customer experience, AI, fulfillment, payment · 2026-06-07

How the business runs end to end: what the customer sees, what happens automatically behind the scenes, where AI helps, and how quality, payment and delivery are handled. Etsy is the cash register; everything else is automated.

The 15-step journey

Stage	Customer experience	Behind the scenes	AI	Status
1. Discover	Finds Joffiels on Etsy search / Pinterest / Google, or the brand site.	SEO'd titles+13 tags, seasonal SEO refresh, Pinterest auto-pins, GitHub Pages brand site, order-by urgency banner.	AI writes SEO + Pinterest copy; seasonal demand timing.	LIVE
2. Browse & get advice	Browses pieces, asks questions, sees what to buy for the occasion.	Shop-by-occasion nav, verified reviews, happiness guarantee, FAQ.	ASK ANGE bot answers frames/sizes/shipping/returns and ADVISES what to buy; defers refunds/personal to a human.	LIVE
3. Select & customize	Picks Material, Size, Quantity (mix sizes), frame style; previews colors, font and wording live; builds a multi-item order.	Variation model (Material x Size x Frame), 60% price floor, bundle discounts, live canvas preview, character counter.	Live final-product render reacts to every choice.	LIVE
4. Upload own photo (optional)	Uploads a personal photo; told instantly if it's too low-res to print sharply and asked for a better one.	Client-side format+resolution check (JPG/PNG/PDF/TIFF, 150 DPI min for the chosen size); backend photo_check re-verifies on the real order.	Auto-evaluates quality; auto-emails a polite 'please resend' if poor.	LIVE
5. Add a gift	Adds a gift e-card + a free personal note; recipient gets a surprise announcement.	Gift e-card line item; recipient email captured (consent=pending).	AI writes the free personal note from the buyer's words.	LIVE
6. Checkout & pay	Adds to cart, adjusts quantities, pays securely.	ETSY handles cart + checkout + payment (Etsy Payments) + buyer protection. Nothing to build; multi-item supported.	-	ETSY
7. Order intake	Gets Etsy order confirmation.	poll-etsy imports every 10 min (no Make/Zapier); per-customer folder created; buyer auto-enrolled to list; subscription orders activated.	-	LIVE
8. Design	(waits) - their personalized piece is created.	Quote/message generated; artwork rendered; buyer photo used if provided.	Claude writes the personalized, copyright-safe message.	LIVE
9. Final QC (before proof)	Nothing yet - quality is checked first.	Preflight (DPI/size/aspect/colour) + optional Claude VISION review; fail = hold + flag, proof NOT sent.	AI vision checks for cut-off text/typos/blur.	LIVE
10. Proof & approval	Receives a FREE digital proof; nothing prints until they approve.	Proof prepared; printing blocked until approval recorded (hard gate).	-	LIVE
11. Fulfillment	(waits) - piece is produced.	Vendor-routed: Gelato (API) / Printful / Printify / digital / manual; live price+availability sync; 60% margin protected.	-	LIVE
12. Shipping & tracking	Gets a tracking number and can follow the package.	Every 6h: Gelato tracking -> order marked shipped/delivered + tracking pushed to the Etsy buyer (createReceiptShipment).	-	LIVE
13. Delivery & delight	Receives the gift; ~6 days later a warm review + referral ask.	Delight loop (idempotent) fires after delivery; referral + thank-you coupon.	-	LIVE

Stage	Customer experience	Behind the scenes	AI	Status
14. Retention / LTV	Occasion reminders, win-backs, membership renewals, gift-recipient becomes a future customer.	Retention engine, subscriptions + AI renewal reminders, gift-recipient capture.	AI writes renewal + win-back emails.	LIVE
15. Back-office (you)	Owner gets daily/Friday/monthly reports automatically.	Daily ledger, Friday business review (+ledger+reconciliation+trend), monthly exec packet, AI ops review, backups, healthcheck.	AI summarizes performance + recommends actions.	LIVE

Image & upload quality (auto-checked, AI-assisted)

- On upload (site): instant client-side check - format (JPG/PNG/PDF/TIFF) + resolution vs the chosen size (≥ 150 DPI), with an immediate re-upload prompt if too small.
- On the real order (backend): photo_check recomputes effective DPI vs the product's print spec; below threshold -> order held.
- Auto-reply: a polite, specific 'please send the original full-size photo' email is sent automatically (owner BCC'd).
- Final product: preflight (DPI/size/aspect/colour mode) + optional Claude vision QC run BEFORE the proof - nothing reaches the customer until it passes.
- Gelato print files: 300 DPI target; the catalog stores exact pixel specs per size.

Payment & money safety

- Payment is taken by Etsy (PCI-compliant) - we never touch card data.
- 60% net margin floor enforced on every variation + bundle.
- Refunds/returns ALWAYS require human approval (hard rule).
- No API keys exposed on the static site; secrets stay in .env / host vault.
- Nightly encrypted-off-machine backup (GitHub push + optional Drive).

Auditor notes & go-live items

- Go-live gate: approve the physical Gelato sample, set real keys, flip TEST_MODE=false.
- Host the server (Render ~\$7/mo) for live Ask Ange answers + inbound webhooks (today: scheduled poll works on your PC).
- Etsy variation auto-upload needs OAuth write scope (CSV is ready now).
- Reviews populate post-launch via the delight loop (no fabricated reviews).
- At volume (>30 orders/day): SQLite -> Postgres + a job queue.

Bottom line

From discovery to delivery the flow is complete and AI-aware: AI advises the buyer (Ask Ange), personalizes the piece, checks photo + final-product quality before the customer ever sees a proof, routes fulfillment, syncs tracking, and runs retention + reporting - while Etsy handles payment and the 60% margin floor + human-approved refunds keep it safe.
